DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because on line 2, there is a phrase containing "is claimed" therein. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-43 are rejected under 35 U.S.C. 102(b) as being anticipated by Sigler et al. (U.S. Patent No. 5,717,830).

Regarding claims 1-10, Sigler discloses an exact system and method for a push-to-talk communication device to participate in a group communication net (Figs 1 & 9, and col. 13/lines 38-43), wherein the group communication system including a (group) controller to manage the group communication net and interfacing with push-to-talk communication device (col. 10/lines 10-24 & col. 17/line 25 to col. 18/line 8), including the method of handling or processing packet data with a transmitter and receiver to send and receive packet data (col. 35/lines 20-24 as user

routes messages using Mobile Packet Data Service), further including a user activated mechanism for user to activate the transmitter or the push-to-talk communication device for transmitting the mentioned packet data (PTT button is used for activating the push-to-talk communication, col. 19/line 40 to col. 20/line 7) as well as the communication device is wireless (Fig. 1, and col. 16/line 61 to col. 17/lin 7 for mobile users addressed), including a memory within the wireless device (for storing ID into a memory, in col. 21/lines 8-15); further including a priority service (col. 20/lines 8-15) such that the priority is dynamically configurable in a manner that an interruption can occur for users with more priority requests (col. 9/lines 45-64) and a secure mode (col. 26/line 54 to col. 28/line 55 for encryption and techniques for ensuring anti-fraud acts and securing technique with encryption algorithm); the communication device further including identification information and updated information can be done or changed with new information (col. 20/lines 23-34 7 Fig. 9 for mobile users in different nets) as well as the including of the dormant mode, wherein the group communication net is capable of offering, and with the user's activation prompting the controller to activate the group communication net (col. 30/line 54 to col. 32/line 25 for standby modes).

As for claims 11-43, these claims with same limitations but in broader claim languages as in claims 26, 32, and 38 are rejected for the same reasons as already discussed in details above for claims 1-10.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Sweet et al (US Patent 6,112,083) & Mauncy et al. (US Patent 6,484,027 B1) disclose push-to-talk communication device in mobile communication system.
